

# Notice of Administrative Appeal of the Chugach National Forest Land and Resource Management Plan and Final Environmental Impact Statement.

Dear Ms. Timberlake and NFS-EMC Staff,

According to Forest Service Regulations contained in 36 C.F.R. part 217, the following undersigned citizens submit this administrative appeal of the Chugach National Forest Land and Management Plan. Many of the undersigned have been involved with various aspects of the planning process over the past five years. Although we have been offered and taken advantage of opportunities to comment, we have been very disappointed with the Forest Service's casual discounting of the vast majority of comments made by local residents, Alaskans, and citizens around the country who favor protecting the wild character of the Chugach.

**WILDERNESS:** The Forest Service failed to recommend wilderness protection for the Copper River Delta despite requests for wilderness from over 30,000 citizens, 3,000 Alaskans, and a majority of local Cordovan fisherman and residents who commented on the DEIS. These citizens' requests were ignored while special deference was given to a minority of objectors whose reasons for opposing wilderness do not hold up to rationale scrutiny. ANILCA Wilderness permanently protects salmon habitat and guarantees the perpetuation of subsistence and commercial fishing activities. We therefore respectfully request that the Forest Service recommend the Copper River Delta for Wilderness designation.

In addition to supporting a wilderness recommendation for the Wilderness Study Area, over 30,000 citizens requested additional wilderness recommendations to protect biologically critical parts of Prince William Sound like Knight and Montague Islands and Jack and Sawmill Bays. The Forest Service not only did not recommend new wilderness in the Sound, it recommended 330,00 acres less than the Reagan Administration did in the current Nellie Juan-College Fiord Wilderness Study Area. We respectfully request the Forest Service restore much of the current WSA in its Wilderness recommendation as well as designate Knight Island, Jack and Sawmill Bays, and the biologically critical Montague Island.

Finally, the protections afforded Brown Bears on the Kenai Peninsula were dramatically weakened when the Final EIS permitted utility corridors and associated roads through critical brown bear habitat. Since Brown Bear Core Areas no longer provide adequate protection for bears, we respectfully request the Forest Service reconsider the request of over 30,000 citizens who requested a Wilderness designation for designated critical Brown Bear habitat as well as the critical salmon habitat of the upper Kenai River watershed.

**WILD AND SCENIC RIVERS:** The Forest Service rationale used in determining the suitability of rivers eligibility for wild and scenic river designations was severely flawed and applied inconsistently and arbitrarily. Not one river on the Copper River Delta was recommended for designation, and outstanding rivers across the Chugach were ignored. The rivers of the Copper River Delta, Prince William Sound and Kenai Peninsula provide outstanding biological, fish and wildlife, and wilderness value even by Alaska's very high standards, and they deserve protection. We request the Forest Service designate suitable rivers of biological, geographical, and high fish and wildlife importance as Wild and Scenic.

**QUIET AND NON-MOTORIZED:** The Forest Service Plan allocates the vast majority of the Forest to winter motorized use and helicopter landings, fails to address jet skis, removes the developed recreation natural quiet prescription contained in the Draft EIS, and adopts an over-broad definition of traditional activities that encourages recreational snowmachining in wilderness areas. We respectfully request that the Forest Service revise the plan to provide a balanced allocation of lands for motorized and non-motorized use, that the affects of jet skis on forest resources be considered and regulated, and that the Forest Service redefine traditional activities to be consistent with the provisions of ANILCA and the original intent of Congress to provide wilderness for Alaskans and the American people.

The rivers of the Copper River Delta, Prince William Sound and Kenai Peninsula provide outstanding biological, fish and wildlife, and wilderness value even by Alaska's very high standards, and they deserve protection. We request the Forest Service designate suitable rivers of biological, geographical, and high fish and wildlife importance as Wild and Scenic.

**QUIET AND NON-MOTORIZED:** The Forest Service Plan allocates the vast majority of the Forest to winter motorized use and helicopter landings, fails to address jet skis, removes the developed recreation natural quiet prescription contained in the Draft EIS, and adopts an over-broad definition of traditional activities that encourages recreational snowmachining in wilderness areas. We respectfully request that the Forest Service revise the plan to provide a balanced allocation of lands for motorized and non-motorized use, that the affects of jet skis on forest resources be considered and regulated, and that the Forest Service redefine traditional activities to be consistent with the provisions of ANILCA and the original intent of Congress to provide wilderness for Alaskans and the American people.

# Notice of Administrative Appeal of the Chugach National Forest Land and Resource Management Plan and Final Environmental Impact Statement.

Dear Ms. Timberlake and NFS-EMC Staff,

According to Forest Service Regulations contained in 36 C.F.R. part 217, the following undersigned citizens submit this administrative appeal of the Chugach National Forest Land and Management Plan. Many of the undersigned have been involved with various aspects of the planning process over the past five years. Although we have been offered and taken advantage of opportunities to comment, we have been very disappointed with the Forest Service's casual discounting of the vast majority of comments made by local residents, Alaskans, and citizens around the country who favor protecting the wild character of the Chugach.

**WILDERNESS:** The Forest Service failed to recommend wilderness protection for the Copper River Delta despite requests for wilderness from over 30,000 citizens, 3,000 Alaskans, and a majority of local Cordovan fisherman and residents who commented on the DEIS. These citizens' requests were ignored while special deference was given to a minority of objectors whose reasons for opposing wilderness do not hold up to rationale scrutiny. ANILCA Wilderness permanently protects salmon habitat and guarantees the perpetuation of subsistence and commercial fishing activities. We therefore respectfully request that the Forest Service recommend the Copper River Delta for Wilderness designation.

In addition to supporting a wilderness recommendation for the Wilderness Study Area, over 30,000 citizens requested additional wilderness recommendations to protect biologically critical parts of Prince William Sound like Knight and Montague Islands and Jack and Sawmill Bays. The Forest Service not only did not recommend new wilderness in the Sound, it recommended 330,00 acres less than the Reagan Administration did in the current Nellie Juan-College Fiord Wilderness Study Area. We respectfully request the Forest Service restore much of the current WSA in its Wilderness recommendation as well as designate Knight Island, Jack and Sawmill Bays, and the biologically critical Montague Island.

Finally, the protections afforded Brown Bears on the Kenai Peninsula were dramatically weakened when the Final EIS permitted utility corridors and associated roads through critical brown bear habitat. Since Brown Bear Core Areas no longer provide adequate protection for bears, we respectfully request the Forest Service reconsider the request of over 30,000 citizens who requested a Wilderness designation for designated critical Brown Bear habitat as well as the critical salmon habitat of the upper Kenai River watershed.

**WILD AND SCENIC RIVERS:** The Forest Service rationale used in determining the suitability of rivers eligibility for wild and scenic river designations was severely flawed and applied inconsistently and arbitrarily. Not one river on the Copper River Delta was recommended for designation, and outstanding rivers across the Chugach were ignored. The rivers of the Copper River Delta, Prince William Sound and Kenai Peninsula provide outstanding biological, fish and wildlife, and wilderness value even by Alaska's very high standards, and they deserve protection. We request the Forest Service designate suitable rivers of biological, geographical, and high fish and wildlife importance as Wild and Scenic.

**QUIET AND NON-MOTORIZED:** The Forest Service Plan allocates the vast majority of the Forest to winter motorized use and helicopter landings, fails to address jet skis, removes the developed recreation natural quiet prescription contained in the Draft EIS, and adopts an over-broad definition of traditional activities that encourages recreational snowmachining in wilderness areas. We therefore respectfully request that the Forest Service recommend the Copper River Delta for Wilderness designation.

In addition to supporting a wilderness recommendation for the Wilderness Study Area, over 30,000 citizens requested additional wilderness recommendations to protect biologically critical parts of Prince William Sound like Knight and Montague Islands and Jack and Sawmill Bays. The Forest Service not only did not recommend new wilderness in the Sound, it recommended 330,00 acres less than the Reagan Administration did in the current Nellie Juan-College Fiord Wilderness Study Area. We respectfully request the Forest Service restore much of the current WSA in its Wilderness recommendation as well as designate Knight Island, Jack and Sawmill Bays, and the biologically critical Montague Island..

Finally, the protections afforded Brown Bears on the Kenai Peninsula were dramatically weakened when the Final EIS permitted utility corridors and associated roads through critical brown bear habitat. Since Brown Bear Core Areas no longer provide adequate protection for bears, we respectfully request the Forest Service reconsider the request of over 30,000 citizens who requested a Wilderness designation for designated critical Brown Bear habitat as well as the critical salmon habitat of the upper Kenai River watershed.

**WILD AND SCENIC RIVERS:** The Forest Service rationale used in determining the suitability of rivers eligibility for wild and scenic river designations was severely flawed and applied inconsistently and arbitrarily. Not one river on the Copper River Delta was recommended for designation, and outstanding rivers across the Chugach were ignored. The rivers of the Copper River Delta, Prince William Sound and Kenai Peninsula provide outstanding biological, fish and wildlife, and wilderness value even by Alaska's very high standards, and they deserve protection. We request the Forest Service designate suitable rivers of biological, geographical, and high fish and wildlife importance as Wild and Scenic.

**QUIET AND NON-MOTORIZED:** The Forest Service Plan allocates the vast majority of the Forest to winter motorized use and helicopter landings, fails to address jet skis, removes the developed recreation natural quiet prescription contained in the Draft EIS, and adopts an over-broad definition of traditional activities that encourages recreational snowmachining in wilderness areas. We respectfully request that the Forest Service revise the plan to provide a balanced allocation of lands for motorized and non-motorized use, that the affects of jet skis on forest resources be considered and regulated, and that the Forest Service redefine traditional activities to be consistent with the provisions of ANILCA and the original intent of Congress to provide wilderness for Alaskans and the American people.

# Notice of Administrative Appeal of the Chugach National Forest Land and Resource Management Plan and Final Environmental Impact Statement.

Dear Ms. Timberlake and NFS-EMC Staff,

According to Forest Service Regulations contained in 36 C.F.R. part 217, the following undersigned citizens submit this administrative appeal of the Chugach National Forest Land and Management Plan. Many of the undersigned have been involved with various aspects of the planning process over the past five years. Although we have been offered and taken advantage of opportunities to comment, we have been very disappointed with the Forest Service's casual discounting of the vast majority of comments made by local residents, Alaskans, and citizens around the country who favor protecting the wild character of the Chugach.

**WILDERNESS:** The Forest Service failed to recommend wilderness protection for the Copper River Delta despite requests for wilderness from over 30,000 citizens, 3,000 Alaskans, and a majority of local Cordovan fisherman and residents who commented on the DEIS. These citizens' requests were ignored while special deference was given to a minority of objectors whose reasons for opposing wilderness do not hold up to rationale scrutiny. ANILCA Wilderness permanently protects salmon habitat and guarantees the perpetuation of subsistence and commercial fishing activities. We therefore respectfully request that the Forest Service recommend the Copper River Delta for Wilderness designation.

In addition to supporting a wilderness recommendation for the Wilderness Study Area, over 30,000 citizens requested additional wilderness recommendations to protect biologically critical parts of Prince William Sound like Knight and Montague Islands and Jack and Sawmill Bays. The Forest Service not only did not recommend new wilderness in the Sound, it recommended 330,00 acres less than the Reagan Administration did in the current Nellie Juan-College Fiord Wilderness Study Area. We respectfully request the Forest Service restore much of the current WSA in its Wilderness recommendation as well as designate Knight Island, Jack and Sawmill Bays, and the biologically critical Montague Island..

Finally, the protections afforded Brown Bears on the Kenai Peninsula were dramatically weakened when the Final EIS permitted utility corridors and associated roads through critical brown bear habitat. Since Brown Bear Core Areas no longer provide adequate protection for bears, we respectfully request the Forest Service reconsider the request of over 30,000 citizens who requested a Wilderness designation for designated critical Brown Bear habitat as well as the critical salmon habitat of the upper Kenai River watershed.

**WILD AND SCENIC RIVERS:** The Forest Service rationale used in determining the suitability of rivers eligibility for wild and scenic river designations was severely flawed and applied inconsistently and arbitrarily. Not one river on the Copper River Delta was recommended for designation, and outstanding rivers across the Chugach were ignored. The rivers of the Copper River Delta, Prince William Sound and Kenai Peninsula provide outstanding biological, fish and wildlife, and wilderness value even by Alaska's very high standards, and they deserve protection. We request the Forest Service designate suitable rivers of biological, geographical, and high fish and wildlife importance as Wild and Scenic.

**QUIET AND NON-MOTORIZED:** The Forest Service Plan allocates the vast majority of the Forest to winter motorized use and helicopter landings, fails to address jet skis, removes the developed recreation natural quiet prescription contained in the Draft EIS, and adopts an over-broad definition of traditional activities that encourages recreational snowmachining in wilderness areas. We respectfully request that the Forest Service revise the plan to provide a balanced allocation of lands for motorized and non-motorized use, that the affects of jet skis on forest resources be considered and regulated, and that the Forest Service redefine traditional activities to be consistent with the provisions of ANILCA and the original intent of Congress to provide wilderness for Alaskans and the American people.
