## TABLE OF CONTENTS

---

<b>Summary and Background</b> .....	<b>1</b>
Process .....	1
<b>Step 1. Setting Up the Analysis</b> .....	<b>2</b>
Purpose.....	2
Products.....	2
Objectives of the Analysis.....	2
Background .....	3
Participants in Roads Analysis Plan.....	4
<b>Step 2. Describing the Situation</b> .....	<b>5</b>
Existing Road System .....	5
Description of the Analysis Area.....	7
<b>Step 3. Identifying Issues</b> .....	<b>14</b>
Issue Summary.....	14
Status of Current Data .....	16
<b>Step 4. Assessing Benefits, Problems, and Risks</b> .....	<b>17</b>
Ecosystem Functions and Processes (EF).....	17
EF1: What ecological attributes, particularly those unique to the region, would be affected by roading of currently unroaded areas?.....	17
EF2: To what degree do the presence, type, and location of roads increase the introduction and spread of exotic plant and animal species, insects, diseases, and parasites? What are the potential effects of such introductions to plant and animal species and ecosystem function in the area? .....	18
EF3: To what degree do the presence, type, and location of roads contribute to the control of insects, diseases, and parasites? .....	19
EF4: How does the road system affect ecological disturbance regimes in the area? .....	19
EF5: What are the adverse effects of noise caused by developing, using, and maintaining roads? .....	19
Aquatic, Riparian Zone, and Water Quality (AQ).....	20
AQ1: How and where does the road system modify the surface and subsurface hydrology of the area? .....	20
AQ2: How and where does the road system generate surface erosion? .....	20
AQ3: How and where does the road system affect mass wasting? .....	22

AQ4: How and where do road-stream crossings influence local stream channels and water quality? ..... 22

AQ5: How and where does the road system create potential for pollutants, such as chemical spills, oils, de-icing salts, or herbicides, to enter surface waters?..... 22

AQ6: How and where is the road system “hydrologically connected” to the stream system? How do the connections affect water quality and quantity (such as, the delivery of sediments and chemicals, thermal increases, elevated peak flows)? ..... 23

AQ7: What downstream beneficial uses of water exist in the area? What changes in uses and demand are expected over time? How are they affected or put at risk by road-derived pollutants?..... 23

AQ8: How and where does the road system affect wetlands? ..... 24

AQ9: How does the road system alter physical channel dynamics, including isolation of floodplains; constraints on channel migration; and the movement of large wood, fine organic matter, and sediment? ..... 24

AQ10: How and where does the road system restrict the migration and movement of aquatic organisms? What aquatic species are affected and to what extent?..... 24

AQ11: How does the road system affect shading, litterfall, and riparian plant communities? . 24

AQ12-AQ14: How and where does the road system contribute to fishing, poaching, or direct habitat loss for at-risk aquatic species? How and where does the road system facilitate the introduction of non-native aquatic species? To what extent does the road system overlap with areas of exceptionally high aquatic diversity or productivity, or areas containing rare or unique aquatic species or species of interest? ..... 24

Terrestrial Wildlife (TW)..... 25

    TW1: What are the direct effects of the road system on terrestrial species habitat? ..... 25

    TW2: How does the road system facilitate human activities that affect habitat? ..... 26

    TW3: How does the road system affect legal and illegal human activities (including trapping, hunting, poaching, harassment, road kill, or illegal kill levels)? What are the effects on wildlife species? ..... 27

    TW4: How does the road system directly affect unique communities or special features in the area? ..... 27

Economics (EC)..... 27

    EC1: How does the road system affect the agency’s direct costs and revenues? What, if any, changes in the road system will increase net revenue to the agency by reducing cost, increasing revenue, or both?..... 27

    EC2: How does the road system affect the priced and non-priced consequences included in economic efficiency analysis used to assess net benefits to society?..... 28

    EC3: How does the road system affect the distribution of benefits and costs among affected people? ..... 28

Commodity Production—Timber Management (TM).....29

    TM1: How does road spacing and location affect logging system feasibility?.....29

    TM2-3: How does the road system affect managing the suitable timber base and other lands?  
    How does the road system affect access to timber stands needing silvicultural treatment? ....29

Commodity Production—Minerals Management (MM) .....29

    MM1: How does the road system affect access to locatable, leaseable, and salable minerals?29

Commodity Production—Range Management (RM).....29

    RM1: How does the road system affect access to range allotments and livestock  
    management? .....29

Water Production (WP) .....29

    WP1: How does the road system affect access, constructing, maintaining, monitoring, and  
    operating water diversions, impoundments, and distribution canals or pipes? .....29

    WP2-3: How does road development and use affect water quality in municipal watersheds?  
    How does the road system affect access to hydroelectric power generation?.....30

Special Forest Products (SP) .....30

    SP1: How does the road system affect access for collecting special forest products?.....30

Special-Use Permits (SU) .....30

    SU1: How does the road system affect managing special-use permit sites (concessionaires,  
    communications sites, utility corridors, and so on)? .....30

General Public Transportation (GT) .....30

    GT1: How does the road system connect to public roads and provide primary access to  
    communities? .....30

    GT2: How does the road system connect large blocks of land in other ownership to public  
    roads (ad hoc communities, subdivisions, inholdings, and so on)? .....31

    GT3: How does the road system affect managing roads with shared ownership or with limited  
    jurisdiction? (RS 2477, cost-share, prescriptive rights, FLPMA easements, FRTA easements,  
    DOT easements)? .....31

    GT4: How does the road system address the safety of road users?.....31

Administrative Use (AU) .....32

    AU1: How does the road system affect access needed for research, inventory, and  
    monitoring?.....32

    AU2: How does the road system affect investigative or enforcement activities? .....32

Protection (PT) .....32

    PT1: How does the road system affect fuels management?.....32

    PT2: How does the road system affect the capacity of the Forest Service and cooperators to  
    suppress wildfires? .....32

PT3: How does the road system affect risk to firefighters and to public safety?..... 33

PT4: How does the road system contribute to airborne dust emissions resulting in reduced visibility and human health concerns? ..... 33

Recreation—Unroaded and Road-Related (UR, RR) ..... 33

UR1, RR1: Is there now or will there be in the future excess supply or demand for roaded or unroaded recreation opportunities? ..... 33

UR2 and RR2: Is developing new roads into unroaded areas, decommissioning of existing roads, or changing the maintenance of existing roads causing changes in the quantity, quality, or type of unroaded (or roaded) recreation opportunities?..... 34

UR3, RR3: What are the effects of noise and other disturbances caused by developing, using, and maintaining roads on the quantity, quality and type of unroaded (and roaded) recreation opportunity? ..... 35

UR4, RR4: Who participates in unroaded and roaded recreation in the areas affected by constructing, maintaining, and decommissioning roads? ..... 35

UR5, RR5: What are these participants’ attachments to the area, how strong are their feelings, and what are alternative opportunities and locations available? ..... 36

UR6, RR6: How does the road system affect the Scenic Integrity? How is developing new roads, decommissioning of existing roads, or changing the maintenance of existing roads into unroaded areas affecting the Scenic Integrity?..... 36

Passive-Use Value (PV)..... 36

PV1: Do areas planned for road constructing, closure, or decommissioning have unique physical or biological characteristics, such as unique natural features and threatened or endangered species?..... 36

PV2: Do areas planned for road construction, closure, or decommissioning have unique cultural, traditional, symbolic, sacred, spiritual, or religious significance? ..... 37

PV3: What, if any, groups of people (ethnic groups, subcultures, and so on) hold cultural, symbolic, spiritual, sacred, traditional, or religious values for areas planned for road entry or road closure?..... 37

PV4: Will constructing, closing, or decommissioning roads substantially affect passive-use value? ..... 37

Social Issues (SI) ..... 38

SI1, SI2: What are people’s perceived needs and values for roads? How does road management affect people’s dependence on, need for, and desire for roads and access?..... 38

SI3: How does the road system affect access to paleontological, archaeological, and historical sites? ..... 38

SI4: How does the road system affect cultural and traditional uses (such as plant gathering, and access to traditional and cultural sites) and American Indian treaty rights? ..... 39

SI5: How are roads that constitute historic sites affected by road management? ..... 39

SI6: How is community social and economic health affected by road management (for example, lifestyles, businesses, tourism industry, infrastructure and maintenance)?..... 39

SI7: What is the perceived social and economic dependency of a community on an unroaded area versus the value of that unroaded area for its intrinsic existence and symbolic values?..40

SI8: How does road management affect wilderness attributes, including natural integrity, natural appearance, opportunities for solitude, and opportunities for primitive recreation? ....40

SI9: What are traditional uses of animal and plant species in the area of analysis? .....40

SI10: How does the road management system affect people’s sense of place? .....41

Civil Rights and Environmental Justice (CR) .....41

CR1: How does the road system, or its management, affect certain groups of people (minority, ethnic, cultural, racial, disabled, and low-income)? .....41

**Step 5. Describing Opportunities and Setting Priorities..... 43**

Assessment of the Problems and Risks Posed by the Current Road System.....43

    Characteristics of High Maintenance Roads.....49

Assessment of the Potential Problems of Building Roads in a Currently Unroaded Area.....49

Opportunities for Addressing Problems and Risks .....50

List of Road-Related Specific Actions, Projects, or Forest Plan Adjustments Requiring NEPA Analysis.....52
